

PaintManager® Software Essentials II

Class Description

This instructor-led course covers the advanced essentials of PaintManager® software operation.

Class length is one day (8 contact hours). Each participant will use a supplied laptop computer during the class.

All PPG Territory Managers that use the PaintManager® software system should attend this training to master the additional essential features of PaintManager® software above and beyond the features covered in PaintManager® Essentials I training. This training builds a knowledge foundation for the more advanced features to provide outstanding support to PaintManager® software customers.

Prerequisite training - PaintManager® Essentials I

Class content and learning objectives

Class participants will be able to:

- Mix undercoat, color, and clearcoat formulas and understand all associated mixing features
- Understand and explain the purpose and function of all job costing features and benefits including
 - Price markup, Cost discount, Pricing adjustment
 - Sundry kits
 - Production management
 - Repair orders and multiple ROs
 - Associated reports
 - Paint Shop Interface
